# SANYO RoHS Compliant Products

**Yes we care!**

***We are pleased to announce that all SANYO Biomedical Products are 100% RoHS compliant.***

On the 1st of July 2006, the RoHS legislation (EU Directive 2002/95/EU) came into effect. RoHS is all about the Restriction of Hazardous Substances and reducing the amount of pollution in the Environment. With this legislation, the EU and many other countries are banning toxic substances in electrical equipment such as Lead, Cadmium, Mercury, Chromium 6+, PBB and PBDE, which can do serious harm to the environment.

SANYO welcomes the RoHS legislation without hiding behind the 'Article 8: Medical Products' exemption.

Adapting to this legislation has been a significant challenge for SANYO, as all RoHS compliant equipment and components had to meet our very strict quality standards.

When considering your next purchase you can be reassured that all SANYO Biomedical products are 100% RoHS compliant.
